## **Forklift Safety Equipment**

Forklift Safety Equipment - In a variety of agricultural, manufacturing and warehouse operations and industries that used powered lift truck or forklifts regularly inside the workplace. These industrial powered lift trucks can be used so as to lower and raise items along with transport things that are either stored in pallets or containers to other places on the property or ship merchandise to various areas. These industrial machinery assist to improve productivity at the jobsite by reducing the need for excessive manual handling of items by staff. According to the National Institute for Occupational Safety and Health, there are about 20,000 severe injuries every year in the United States and approximately 100 fatalities because of the result of lift truck incidents.

There are various types of lift trucks that have several load capacities. These kinds differ for specified maximum weight and forward center of gravity where a load is concerned. Worker injuries usually take place as a result from collision with pedestrians, falls from the forklift, forklift overturn or crushing incidents. Operator falls could take place as the employee ascends or descends into the driver cab or becomes ejected from the machinery in the event of an incident or a collision. Forklifts could overturn because of being overloaded, or having an unequal center or gravity of the cargo or traveling over an uneven surface which can cause the vehicle to topple over. It is important for other co-workers to observe strict preventive policies if working next to the lift truck. Without sufficient safety measures, pedestrian co-workers are at risk from collisions or accidents connected with an unsafe cargo.

There are strict training and standards to be following in relation to forklift maintenance, operation and training. One example, people in non-agricultural trades under the age of 18 years are not permitted to operate a forklift. It is required that all forklift operators must have undergone both practical and theoretical training prior to commencing forklift operation and they are also required to take refresher courses.

The standards that are defined in the "American National Standard for Powered Industrial Trucks, ANSI B56.1-1969 are what powered industrial trucks have to follow. The particular OSHA standards which employers and employees need to follow as stated in the General Industry Standards consist of 1910.178 "Powered industrial trucks", and standards for Marine Terminals 29 CFR 1917 Subpart C, "Cargo handling gear and equipment" and Long shoring 29 CFR 1918 Subpart G, "Cargo handling gear and equipment other than ship's gear.

There are different other regulations and directives which are essential for employers to be aware of. The NIOSH and OSHA both comprehensively outline regulations or signpost employers and employees to all regulations which apply.
